## HEATED CHAIRS

### Technical specifications:

- Operating voltage: 230V
- Maximum output: 25 W / 230V
- IP rating: protection class II
- wiring: 0.5 flat ribbon cable and plug connection

### Product description:

The upholstery on the seats and backs of the Thermoplush chairs is firm. The seat is fitted with a wireless, surface heating element made of carbon, similarly to our heated pew runners, seat pads and carpets.

Upon request, the backrest can also be heated. Only premium-grade velvet fabric is used in the upholstery. It is extremely hard-wearing and soil-repellent as the fibres have been impregnated. All materials are classed as not easily flammable according to B1 DIN 4102. The stacking chairs have a parabolic, chrome-plated frame (22 x 2 mm tubing). The wood shells are in varnished natural beech. When the chairs are arranged in rows and linked, the connecting lugs also provide the electrical connection without need for further sockets.

We supply the Thermoplush chairs ready for connecting.
